Overview

The ambition of Finavia is to position Helsinki Airport as a leading European airport for travel between Asia and Europe, while maintaining excellent flight connections between Finland and the rest of the world. As part of that, screens are critically important in ensuring passenger engagement with the airport, its facilities and offerings. Samsung’s heritage in digital signage and involvement in major projects across the globe made them the ideal partner for Finavia, providing best-in-class displays to promote the beautiful country of Finland.

Technology Highlights

- Superior picture quality with LED HDR technology and advanced design possibilities
- High brightness, IP5x certification and non-glare panel to clearly display flight information
- Easy and integrated management with the MagicINFO platform
- Durable, long lasting performance

Customer Needs

As part of the development of Aukio, Helsinki Airport’s new extension, Finavia wanted to ensure that passengers were left with a memorable and lasting experience of Finland, from the moment they arrived. Described as a display window into the country, Aukio is where millions of international passengers get their first taste of Finland and its famous design capabilities. Therefore, Finavia designed a forest-inspired plaza, equipped with the latest in LED screen technology to create a truly impactful space.
Solution

360-degree engagement with superior picture quality

Samsung installed a 360-degree IF Series LED display in addition to PHF 55” standalone displays throughout the terminal, providing brilliant picture quality to create an immersive space for all passengers, with an ultra-modern feel. Following an art competition in 2017, the winning piece is now displayed on the IF Series, showcasing the heritage of Finnish design and creating a truly unique environment, bespoke to Helsinki Airport.

Samsung’s IF Series displays offer a perfect combination of superior picture quality and intuitive usability, bringing together video processing technologies with High Dynamic Range (HDR) picture refinement to add crystal-clear clarity to any featured content. The IF Series also implements dynamic peaking that empowers displays to reach peak brightness levels nearly two times higher than standard LED solutions.

The PHF 55” is a premium grade display that supports up to 700 nit brightness in a slim, compact design with narrow bezels. High brightness capability and non-glare panels ensure that PHF can withstand a range of environmental conditions, such as an airport, where maintaining clear visibility of flight information is critical for operations and passenger satisfaction.

Easy installation and reliability in any environment

Helsinki Airport is a major hub for Europe, welcoming visitors from across the world. Therefore, installation had to be quick, efficient and with as little disruption as possible. The IF Series’ advanced design offers businesses and integrators a variety of easy installation options, including on an incline or on a ceiling, opening new possibilities regardless of any environmental constraints.

All Samsung IF Series displays undergo rigorous factory calibration to ensure uniform brightness and color chromaticity. When coupled with the Samsung LED Signage Manager’s advanced picture settings, this enhanced treatment produces an excellent, reliable presentation. Full-front access to critical signage components also enables fast and convenient maintenance, ensuring 24/7 operation in a busy airport environment to maintain passenger engagement.

Integrated management capabilities

Samsung’s MagicINFO platform allows users to create, schedule and deploy content across an entire signage network. Meanwhile, they can also monitor and adjust display settings and troubleshoot potential performance issues from any location via remote access, making sure that passenger engagement is not impacted at any time. Powered by TIZEN, the powerful Samsung operating system, PHF standalone displays are an all-in-one solution built to handle the demands of a busy airport environment.

Result

Finavia’s ambition was to install a solution that enhanced the new extension at Helsinki Airport, creating a place that represents the traditions of Finland and engages passengers from the moment they arrive. Samsung’s visually impactful displays have allowed Finavia to put visitor experience at the heart, surprising and delighting over 21 million passengers that it serves every year.

“"The idea of this whole space is to impress people who arrive at Helsinki Airport for the first time. The curves were originally drawn by the architect without knowing the limitations of the technology. Samsung definitely walked the extra mile to make this implementation possible. "

- Eero Knuutila, Head of Sales Department, Finavia
